PROFILE

Data Engineer with 4.11+ years of experience designing scalable ETL pipelines using AWS, PySpark, Python, SQL, Glue, Lambda, S3, and Redshift. Experienced in processing 5M+ records/day, building cloud data lakes, optimizing data warehouses, and automating end-to-end data migration solutions. Strong background in performance tuning, workflow orchestration, and data quality

TECHNICAL SKILLS

Programming Languages: Python (PySpark, Pandas, NumPy), SQL
Big Data Technologies: Apache Spark, PySpark, Databricks
Cloud Platforms: Amazon Web Services (AWS)
AWS Services: Amazon S3, AWS Glue, AWS Lambda, Amazon Redshift, Amazon Athena, Amazon RDS, AWS Step Functions, Amazon CloudWatch, IAM
Databases: MySQL, PostgreSQL, Amazon Redshift
Data Engineering: ETL Pipelines, Data Lake, Data Warehousing, Data Migration, Data Modeling, Schema Evolution, Data Validation, Workflow Orchestration, Performance Tuning, Data Quality
File Formats: CSV, JSON, Parquet
Tools: Git, Linux, VS Code, Jira, Microsoft Excel, Power BI

EXPERIENCE

ASTRIX TECHNOLOGIES PRIVATE LIMITED) Location: Bangalore
- Estd: 2007
Data Engineer | Bangalore, India | Oct 2021 – Present

- Designed scalable ETL pipelines using AWS Glue, PySpark, Python, SQL, Amazon S3, and Amazon Redshift.
- Processed and transformed over 5 million records per day using AWS Glue and PySpark.
- Built cloud-based data lakes on Amazon S3 for storing and managing large-scale datasets.
- Developed AWS Glue ETL jobs for data extraction, cleansing, transformation, validation, and loading.
- Automated ETL workflows using AWS Lambda and AWS Step Functions.
- Implemented incremental data loading and schema evolution to support changing business requirements.
- Optimized Amazon Redshift tables and SQL queries, improving data processing and reporting performance.
- Implemented logging, error handling, monitoring, and recovery mechanisms for production ETL pipelines.
- Monitored ETL jobs using Amazon CloudWatch and resolved production issues proactively.
- Collaborated with Business Analysts, QA Engineers, and Data Architects to deliver scalable data solutions.
- Participated in Agile ceremonies including sprint planning, code reviews, testing, deployment, and production support.

PROJECTS

1. Cloud Data Migration: Databases to AWS Redshift. (Feb 2024) – (Present)

Description

Designed and implemented an enterprise-scale ETL pipeline to migrate data from MySQL, Oracle, and DB2 into Amazon Redshift for analytics. Built a cloud-based data lake using Amazon S3 and automated end-to-end data migration using AWS Glue, Lambda, Step Functions, and PySpark.

Roles & Responsibilities

- Designed and developed end-to-end ETL workflows using AWS Glue and PySpark.
- Extracted data from MySQL, Oracle, and DB2 databases.
- Built scalable Amazon S3 data lakes for raw and processed datasets.
- Developed transformation logic including data cleansing, validation, deduplication, and schema evolution.
- Loaded transformed data into Amazon Redshift using optimized loading strategies.
- Improved Redshift query performance through table optimization and SQL tuning.
- Automated ETL execution using AWS Lambda and Step Functions.
- Implemented CloudWatch monitoring, logging, alerting, and failure recovery.
- Performed data validation and reconciliation to ensure 100% data accuracy.

2. AWS Data Migration: Databases to AWS Redshift (Nov 2021) – (Dec 2023)

This project focuses on migrating and processing data from multiple sources into AWS Redshift using an ETL pipeline. Process includes ingesting data into AWS S3, processing that data and storing it into AWS redshift.

Description

Developed an AWS-based ETL solution to ingest, transform, validate, and load enterprise data into Amazon Redshift for business reporting.

Roles & Responsibilities

- Built ETL pipelines using AWS Glue, PySpark, SQL, and Amazon S3.
- Implemented parent-child dependency validation.
- Developed incremental loading and optimized ETL workflows.
- Loaded structured and semi-structured data into Amazon Redshift.
- Performed data quality checks, reconciliation, and production monitoring using CloudWatch.
- Optimized SQL queries and Redshift performance for faster analytics.

EDUCATION

Bachelor of Science (Hons.)
Mahatma Phule Krishi Vidyapeeth, Rahuri
2018 – 2023
CGPA / Percentage: 74.80%
